In the pictures on the left, the cautery shelf with a permanent 230V supply is presented once inserted and once pulled out. Two devices can be plugged into the sockets in the shelf. The pull-out cautery shelf is hidden behind the tilt door that slides under board. With this solution, the door does not get in the way during the work, it can still be inserted and the devices are immediately ready to use.

In the middle pictures, the upper drawer with the ZV1 drawer insert is pulled out.

In the pictures on the right there is pulled out trash bin with automatic SERVODRIVE opening. After pressing the door with your knee the electric opening is activated and the bin automatically pulls out. The bin is inserted in the same way like drawers with soft close. Using the handle, the bin can be opened even without electricity. Sink cabinet with pull out trash bin is also available without automatic opening.
